

This Project is about Paying Guest Information Management System. Paying Guest Information Management System is a way which helps the students and other people who are looking for accommodation in a smart way, the aim of these project is to directly connect users and Paying Guest Owner in a way that Paying Guest owner can advertise their place and user can book their PG easily, this application is having some unique features and functionalities like user can view the place with the help of GPS, share the location share the place and user can also internally advertise the place so they can find their partner.

As we know that, People started going outside district or state for their jobs and study purpose. For that, People cannot aware about outside state or district. So, they face some problems such as how they find appropriate Paying guest house at different districts or outside the state for their nearby working area?how they find the best Paying guest house according to their requirements and budget nearby their working area? So here, we introduce such a new System which is capable of recording that how many Paying Guest houses are available in required area that people search in our website.

We also use third party apis for add more information for any PG. like near by local market , atms , banks, transport service , food service.

Pg owner can register themself and add their pg and pg details.

Pg users also add feedback / ratings / reviews for pg and their services.

Any user can connect with other users with email for other queries.
